

Murray Backflow School

Testing and Repair Certification

Murray Backflow Training School Commitment to Excellence Agreement

Here at Murray Backflow Training School, we pride ourselves on giving the very best training offered in the backflow industry. We meet and exceed all the guidelines from the Florida Manual 14 (M-14) which is the code book for backflow and cross-connection. We carefully instruct each of our students the correct way of testing a backflow to understand what backflow is and all that it relates to, and how to repair backflows.

We attached our testing methods for the Reduced Pressure Backflow (RPZ), the Double Check Backflow (DC), and the Pressure Vacuum Breaker (PVB). There is also a course syllabus attached in respect to all four days of class. Please take your time to go over all the documents so you will better understand what you will be learning and the way we instruct you throughout the course.

Once you have read the documents, please be so kind as to print your name in the appropriate place along with signing your name (your legal name) as it will appear on your certification.

We thank you for taking your first step to the Murray Backflow Training School's commitment to excellence.
